AMARNATH S. PATEL

apatel6ty@protonmail.com | apatel.co | github.com/jeebuscrossaint | +1 561-603-2661

EDUCATION

University of Central Florida **Undergraduate Student 4.00 GPA**

Photonics Science and Engineering, Computational Physics August 2025 - Present

- Relevant Coursework: Geometric Optics, Matrix & Linear Algebra, Quantum Information Processing, Discrete Computational Structures, Introduction to Theoretical Methods for Physics, Statistical Methods 1

Florida Atlantic University **3.66 GPA**

Computer Science coursework - High School Diploma (111 Credit Hours) August 2021 - May 2025

- Background in Embedded Systems, UNIX systems
- Relevant Coursework: Data Structures and Algorithms, Computer Logic Design, Matrix Theory, C & C++ programming, Deep Learning, Computer Architecture, Calculus I-III, Differential Equations

SKILLS

Programming Languages: C/C++, Python, Shell (Fish, Bash, tcsh, Powershell)

Tools & Frameworks: Nix, Helix, Docker, Git, AI-LLMs, XMake, CMake, Proxmox, Tailscale

Operating Systems: Linux Distributions, BSD, Windows, OpenSolaris

PROFESSIONAL EXPERIENCE

UCF Astrophotonics Lab - Undergraduate Researcher August 2025 - Present

- Developing software for control systems and data acquisition for optical instrumentation and astronomical applications under Dr. Eikenberry spanning Photonics & Physics departments.

IEEE UCF CPU Project - Kernel Development Team Member August 2025 - Present

- Developing kernel-level software for RISC-V CPU built from scratch, porting Doom and Quake to custom hardware architecture with 40 other members.

Teaching Assistant - Employee August 2024 - May 2025

- Assisted 70 undergraduate students with learning calculus. Part-time position (10h/week).

Advanced Experimental Vehicles - Programmer, Leader, Builder November 2023 - May 2025

- Developed Electron app using Raspberry Pi 5 for monitoring and controlling solar car systems
- Won 2nd Place in Division and Lockheed Martin Award for "Highest Level of Engineering Excellence" with 20 other people.

FAU Grant-Funded AI Safety Research Project January 2024 - March 2025

- Developed AI/LLM powered research project for writing, grant funded by Florida Atlantic University with HPC access with 5 members.

PROJECTS

gentec-camera November 2025

- Developed Python SDK wrapper for IR beam profiling camera enabling automated data acquisition, real-time beam analysis, and FITS output for optical instrumentation research

UniUtils October 2023 - November 2024

- Schedule generation tool for students with classroom finder functionality. 1st Place at Night Hacks 2023 hackathon, submitted to ShellHacks
