EDUCATION

University of Central Florida **Undergraduate Student 4.00 GPA**

B.S. in Physics (Optics & Lasers) and Mathematics, Computer Science Minor (38 credit hours) August 2025 – Present

Florida Atlantic University **3.66 GPA**

University coursework completed via FAU High School, ages 14–18 (111 credit hours) August 2021 – May 2025

RESEARCH EXPERIENCE

UCF Astrophotonics Lab, CREOL – Undergraduate Researcher August 2025 – Present

Supervisor: Dr. Stephen Eikenberry

- Developing instrumentation and automation software for astrophotonics research spanning CREOL and the UCF Physics Department.
- Built an unattended pipeline that measures the wavelength-dependent complex transfer matrix of a photonic lantern via [off-axis digital holography](#), coordinating 4 instruments across all-port × C-band (1525–1575 nm) sweeps at 98% reconstruction fidelity (building on the method of Dobias et al., *Opt. Express* 2026).
- Implemented the reconstruction chain: FFT sideband isolation and demodulation, Butterworth filtering, and numerically optimized quadratic-phase correction, feeding LP-mode decomposition to recover complex modal amplitude and phase.
- Developing [PolyOculus](#), control and automation software for an 8-telescope photometric observation array; implementing INDI-protocol mount control, focuser automation, RA/Dec coordinate slewing, and backlash compensation.
- Developed Python SDK wrapper ([gentec-camera](#)) for an IR beam profiling camera enabling automated acquisition, real-time beam analysis, and FITS output.

UCF Physics Department – Paid Undergraduate Research Assistant March 2026 – Present

Physics Education Research – Supervisor: Dr. Zhongzhou Chen

- Developing [ESTELA](#), an automated system that generates multi-version isomorphic physics exams from AI-assisted problem banks for introductory STEM courses.
- Built in Rust with a vanilla JS frontend; parses YAML problem banks across 13 topic areas supporting 11 question types, renders LaTeX math via KaTeX, and exports multi-version exams as LaTeX or print-ready HTML/PDF.
- Funded by NSF award 2421299 and Gates Foundation INV-076932.

FAU Grant-Funded AI Safety Research Project (High School) January 2024 – March 2025

Supervisor: Tucker Hindle, Florida Atlantic University

- Benchmarked 10+ coherence and detection methods (BERT NSP, GPT-2 perplexity, RoBERTa, LSA, NLI, burstiness) across 3,125+ generated sequences to evaluate approaches for identifying AI-generated text.
 - Identified GPT-2 perplexity as the strongest discriminator (3.3× gap between coherent and incoherent text); BERT NSP failed to distinguish the two.
 - Characterized a fundamental quality–evasion tradeoff across all humanization approaches tested, including iterative sampling, content abstraction, and RL-based methods.
 - Grant-funded with HPC access; findings presented at the Wilkes Honors College Symposium (2025).
-

OTHER EXPERIENCE

Secretary – National Society of Black Physicists (NSBP), UCF Chapter 2025 – Present

- Coordinate meetings, records, and communications for the UCF student chapter of the National Society of Black Physicists.

President — Coding Club, Florida Atlantic University (High School)

2023 – 2025

- Founded and led a student coding club; organized meetings and collaborative programming projects with peers.

Teaching Assistant — Calculus (High School)

August 2024 – May 2025

- Assisted 70 undergraduate students with learning calculus; office hours, exam review, grading. Part-time (10 h/week).

Advanced Experimental Vehicles — Programmer, Leader, Builder (High School) November 2023 – May 2025

- Configured Arch Linux ARM on Raspberry Pi 5 with Hyprland compositor and WireGuard VPN, enabling worldwide real-time telemetry monitoring of BMS, GPS, and camera feeds.
 - Won 2nd Place in Division and Lockheed Martin Award for “Highest Level of Engineering Excellence.”
-

PRESENTATIONS

Batch Processing for Automated Grading via Azure OpenAI

June 2026

University of Central Florida, Downtown Campus. ESTELA project (Physics Education Research, Dr. Zhongzhou Chen).

Coherence and Detection Approaches for Identifying AI-Generated Text

March 2025

Wilkes Honors College Undergraduate Research Symposium, Florida Atlantic University.

TECHNICAL REPORTS

Coherence and Detection Approaches for Identifying AI-Generated Text

2025

- Empirical study of AI-text detection and adversarial evasion: benchmarked 10 coherence and detection methods (GPT-2 perplexity best, 3.35× separation; RoBERTa the only effective detector) and built four evasion pipelines, characterizing a consistent quality–evasion tradeoff. Grant-funded, Florida Atlantic University.
-

SELECTED PROJECTS

CELERIS — Metalens Design Pipeline & From-Scratch RCWA Solver

2026

- From-scratch, validated electromagnetic solver for metalens/metasurface design via rigorous coupled-wave analysis (RCWA): 1D TE/TM and 2D-vectorial formulations, Li/Liu–Fan Fourier factorization, and Redheffer scattering-matrix recursion. Cross-validated against the grcwa and Stanford S⁴ solvers (agreement to 1e-7) and reproduces canonical published metalenses (Khorasaninejad et al., *Science* 2016; Chen et al., *Nat. Nanotechnol.* 2018).
- Full design→analysis→fabrication pipeline that standalone RCWA kernels lack: meta-atom library sweeps, phase mapping (incl. achromatic and Pancharatnam–Berry designs), an optical-analysis battery (Strehl, MTF, Zernike, chromatic, tolerance), GPU-accelerated far-field propagation, and fabrication-ready GDSII export — from a CLI, Python bindings, or a native desktop GUI. C++23/CUDA. *Manuscript in preparation (Computer Physics Communications)*.

coat — Cross-Platform Color-Scheme Configurator

2026

- Rust CLI that applies Base16/Base24 color schemes across 22 Linux applications and themes Windows system colors from a single config file; compatible with the 700-scheme tinted-theming ecosystem, with a terminal scheme browser and live RGB previews.
-

TECHNICAL SKILLS

Programming Languages: C/C++, CUDA, Rust, Python, JavaScript, Shell (Fish, Bash, tcsh), LaTeX/Typst

Scientific Computing: NumPy, SciPy, GPU/CUDA acceleration, FFT & signal processing, electromagnetic simulation (RCWA)

Tools & Libraries: Qt/PySide6, Docker, Git, CMake, XMake, INDI, KaTeX

Instrumentation: GPIB/VISA, RS-232, GigE Vision camera acquisition, tunable IR laser control, motorized polarization control, FITS & GDSII data formats

Operating Systems: Linux (Arch, NixOS, Ubuntu), BSD, Windows
